(54) Title: LINEAR LIGHT SOURCE AND PRODUCTION METHOD THEREFOR AND SURFACE EMISSION DEVICE

(54) 発明の名称: 線状光源装置及びその製造方法、並びに、面発光装置

(57) Abstract: A linear light source comprising light emitting elements (5) arranged along the longitudinal direction of a square rod-like printed board (4), and reflectors (6) arranged alternately with respective light emitting elements (5). Opposing surfaces (6a) of the reflectors (6) on the opposite sides of the light emitting element are inclining such that the opening area increases toward the light exiting direction of each light emitting element (5). Furthermore, a resin sealing layer (10) of trapezoidal prism shape or frustum of cone shape is provided by filling a recess defined by the printed board (4), the light emitting element (5), and the reflector (6) with light transmitting resin sealing material. The region from the end face adjacent to the mounting surface of the printed board (4) to the forward end part of the reflector (6) is covered with a stripe reflective member comprising a reflective sheet (1) or a vapor deposition film (12).

(57) 要約: 線状光源装置は、角棒状のプリント基板4の長手方向に沿って配設された発光素子5と交互に配置された反射板6の分素子5と交互に配置された反射板6の分割板6の分割板6の分割板6の分割を表光素子5の光の出射方向に傾向うにしたがって開口面積が大きくなるように傾及対している。また、プリント基板4、発光素過に傾及を充填しておる台形柱状又は片上では大きなる台形柱状又は片上では大きなのがある。
